A)Description: major component of wild-type curli, interaction between CsgA and CsgB tri
A)Note: curli are thin, coiled fibers expressed on the surface of Escherichia coli that
and H-kininogen, in the absence of CsgA, CsgB can self-assemble into polymers
F;1-20/Domain: signal sequence #status predicted <SIG>

Xanthomonas campestris pv. translucens.";
Mol. Genet. 223:163-166(1990).
-!- FUNCTION: Loe nucleation proteins enable bacteria to nucleate
crystallization in supercooled water.
-!- SUBCELLULAR LOCATION: Outer membrane (By similarity).
-!- DOMAIN: CONTAINS 153 IMPERFECT REPEATS OF THE CONSENSUS
OCTAPEPTIDE A-G-Y-G-T-L-T; FURTHER ON A 16-RESIDUB AND A
REGIONAL 48-RESIDUE PERIODICITY IS SUPERIMPOSED.
-!- MISCELLANGOUS: A STRUCTHAR MODEL IS SUGGESTED IN WHICH THE ICE
NUCLEATION PROTEIN DISPLAYS A SYMMETRY RELATED TO THAT OF ICE.
-!- SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                              151

-!-EUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

-!-CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl and pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at Ala-Tyr-|-Leu-Lys-Lys-.

-!-COFACTOR: Binds 1 zinc ion per subunit.

-!-COFACTOR: Binds 1 zinc ion per subunit.

-!-FULLY SATURATED, UNBRANCHED 1-0-ALKYL CHAIN (MAINLY C24:0) AND A MIXTURE OF FULLY SATURATED UNBRANCHED 2-0-ACYL CHAINS (C12:0).

                                                                                                                                                                                                                                           Webb J.R., Button L.L., McMaster R.W.;
"Heterrogeneity of the genes encoding the major surface glycoprotein of Leishmania donovani.",
"Of Leishmania donovani.",
Mol. Biochem. Parasitol. 48:173-184(1991).
-!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.
-!- CATALYTIC ACTIVITY: Preference for hydrophobic residues at P1 and P1' and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr-|-leu-Lvs-Lvs-.
-!- COFACTOR: Blinds I zinc ion per subunit (By similarity).
-!- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
-!- SIMILARITY: Belongs to peptidase family M8.

-: SUBCELLULAR LOCATION: Outer membrane.
-:- DOMAIN: CONTAINS INPERFECT REPEATS OF A CONSENSUS OCTAPEPTIDE A-G-Y-G-S-T-X-T; FURTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE PRIODICITY IS SUPERINPOSED.
-:- MISCELLANEOUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICE NUCLEATION PROTEIN DISBLAYS A SYMMETRY RELATED TO THAT OF ICE.
-:- SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   53 ANAALALQSDA----RKYD-QLVTRVVTH-EMAHAGQGADNSTIELTQNGFRNNATIDQW
